

VANNAPU DIPAK GOUD

Phone:9391964396

Email:vannapudipak123@gmail.com

CAREER OBJECTIVE

An enthusiastic and dedicated individual seeking an entry-level position where I can apply my technical knowledge and problem-solving skills. I aim to work in a challenging environment that encourages continuous learning, growth, and innovation while contributing to the organization's success.

TECHNICAL SKILLS

- **Front-end Languages** : HTML, CSS, JavaScript.
- **Technical-skills** : Core Java, Software testing
- **Databases** : MySQL
- **Tools & IDEs** : NetBeans, VS Code

SOFT SKILLS: Time Management, Communication, Leadership, creative, hard work

PORTFOLIO WEBSITE: <https://dipakportfolio.netlify.app/>

EXPERIENCE

Application Developer

BSIT Software services Private Limited [Hyderabad, India]

Contributed as an Application Developer with a focus on building responsive and user-friendly front-end interfaces using HTML and CSS, along with hands-on experience in backend support using SQL for database handling and query optimization.

EDUCATION

Aurora's Technological and Research institute(ATRI),Hyderabad, India

Bachelors in Computer Science Engineering - **CGPA: 7.2/10**

Aug 2019-Jul 2023

Narayana Junior College, Hyderabad, India

Telangana Board of Intermediate Education (TSBIE)

Class XII MPC – **Percentage: 87.2%**

Apr 2017-Apr 2019

Sri Krishnaveni high school, Nagar Kurnool, India

Board of Secondary Education (SSC)

Class X – **CGPA: 8.7**

Jun 2016-Apr 2017

PROJECTS

Privacy preserving location data publishing: a machine learning approach

Role: Team Leader

ATRI-Hyd (Oct2022- Nov 2022)

- The process of data publication can be highly risky as it may disclose individuals' sensitive information.
- A widely accepted privacy for the publication of datasets is k-anonymity.
- The anonymization scheme based on achieving k-anonymity by grouping similar trajectories and removing the highly dissimilar ones.
- The anonymisation we use is known as MLA(Machine learning based anonymisation)
- The methods using in the preserving is k-means algorithm and generalisation algorithm
- Our data is unsupervised data so k-means algorithm is used.
- The datasets that are used in this is taxi trajectory (TDRIVE) dataset.The id for the data drive is longitude latitude data location.

Efficient Retrieval over documents encrypted by attributes in Cloud Computing

Role: Team Leader

ATRI-Hyd (Dec2022-Jun2023)

- Secure document storage and retrieval is one of the hottest research directions in cloud computing.
- Searchable encryption schemes have been proposed and under work, few of them support efficient retrieval over the documents which are encrypted based on their names.
- A hierarchical attribute-based encryption scheme is first designed for a document collection.
- A set of documents can be encrypted together if they share an integrated access structure.
- The ciphertext-policy attribute-based encryption (CP-ABE) schemes, both the ciphertext storage space and time costs of encryption/decryption are saved.
